TroGlass Duo Pastel

Material Features

Material: cast acrylic

Finish: matt one side, gloss the other

Cutting method: laser, saw

Sheet Size: 1/1 1216 x 606 mm
1/2 606 x 606 mm
1/4 606 x 301 mm

Be fully in trend with TroGlass Pastel – a fresh and lively pastel-colored cast acrylic glass. TroGlass Pastel has all the excellent physical properties of cast acrylic sheets. It has a high flexibility of use due to one gloss and one matte side and is color stable with no bleaching or fading. Typical applications are visual communication signs, shop fittings, gifts, decorations and all applications that fit for a baby shower.

Anodised Aluminium

Material Features

Material: anodized aluminium
Finish: gloss, matt
Cutting method: saw, guillotine
Sheet size: 1000 x 500 mm

Cut to size service

- Suitable for both for engraving with a CO2 laser and with mechanical engraving devices
- Image contrast is caused by the removal of the coloured coating and almost photographic qualities can be achieved (surface qualities are only guaranteed for the top side)
- Please consider that the Standard Line is less robust due to the thinner anodised coating
- Typical applications are type plates, signs with advertising impact and ID tags

LaserPaper

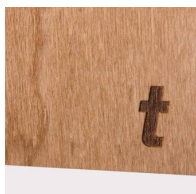

Material Features

Material: paper

Sheet Size: 297 x 210 mm (A4)

LaserPaper is a laser-friendly paper, which produces outstanding results when printed, laser cut and laser engraved. Available in a variety of shades and gsm weights. Trotec's LaserPaper has been carefully selected to produce a high level of color contrast when laser engraved and a crisp, clean edge when laser cut. Incredibly versatile, our LaserPaper can be used for a multitude of applications such as invitations, brochures, business cards, scrap booking and greet-ing cards.

Laser Marking Solutions

Material Features

Material: pigments and particles embedded in a carrying liquid

Usage: when laser marked, the particles melt together with the surface of the core material (e.g. metal), leaving a permanent dark marking

Consumption: recommended within 6 months after delivery

- By applying the spray or paste on the blank surface (pure metal), CO2 lasers, as well as fiber or Nd:YAG lasers, produce a permanent black marking
- This marking is highly resistant to mechanical and chemical stresses as well as high temperatures
- Perfect for bar coding, product serialisation, logos or individual pieces
- High contrast and resolution can easily be achieved

* Spray not recommended for airfreight
* Mark Solid tutorial available on request.
